

3-Way Client Session Manager (v1.1)

Tera Term • PuTTY • WinSCP

Overview

Designed for fast, repeatable SSH/SFTP workflows.

“3-Way Client Session Manager” is a Windows utility that centralizes SSH2/SFTP session management and launches **Tera Term**, **PuTTY**, or **WinSCP** using saved connection details. It also supports **Tera Term macro (.ttl) files**, optional credential storage, and automatic session backups. 3-Way_CSM is 100% compatible with “sessions” from the SSHTTSM predecessor. (see %\Temp%\teraterm5 folder)

Only **one instance** of the program can run at a time.

Requirements

- Windows OS
- At least one of the following installed:
 - **Tera Term** (mandatory)
 - **PuTTY**
 - **WinSCP**
- (Optional) Tera Term macro files (.ttl) placed in your %\Temp%\teraterm5 sessions folder

The application automatically searches common install locations for these three client programs.

Main Window Layout

- **Server List (left)**
Saved sessions (with checkboxes for tracking tasks or rollouts)
- **Connection Details (fields on right)**
 - Session Name
 - IP Address
 - Port (default: 22)
 - Username (optional)
 - Password (optional)
- **Client Selection**

- Tera Term
 - PuTTY
 - WinSCP
 - **Action Buttons**
 - **SAVE Session**
 - **CONNECT**
 - **PING**
 - **EDIT** (Tera Term macros)
 - **Sessions Folder**
 - **Help (?)**
 - **About**
-

Creating a New Session

1. Enter:
 - **Session Name**
 - **IP Address**
 - **Custom Port** (defaults to 22)
2. (Optional for auto login) Enter **Username** and **Password**
3. Enable [**User/Pswd OK**] if you want credentials saved and auto-login enabled
4. Click **SAVE Session**

Sessions saved without credentials will later prompt for login credentials.

Connecting to a Session

- Select your client (Tera Term / PuTTY / WinSCP)
- Select a saved session from the list or type in new name, IP and port (SAVE optional).

Note: SAVE is not required to make a new connection – optional if you want to keep it.

- Enable [**User/Pswd OK**] if you want auto-login enabled
- Click **CONNECT** or press **Enter**

Client Behavior

- **PuTTY**
Uses *CLI interface* for SSH2 connections.
 - **Tera Term**
Uses CLI interface for SSH2 connections.
 - **WinSCP**
Uses CLI interface for SFTP connections
-

Password Handling

- Saved Username and Password are **obfuscated**, not stored in plain text.
 - Enable **User/Pswd OK** option to:
 - Save credentials
 - Enable automatic login
 - Use **Show Password** to temporarily reveal username/password fields.
-

Tera Term Macros (.ttl)

- Available `.ttl` files are displayed automatically from the `%\Temp%\teraterm5` sessions folder.
- Up to **8 macros** are displayed in the main window.
- Selected macro will run automatically when making new connection.

Macro Editor

- Choose an existing macro (or just click edit to create a new one):
- Click **EDIT**
- Built-in editor supports:
 - Create
 - Edit
 - Save
 - Reload

- New macros are saved into the sessions folder

Restart is required for newly added macros to appear in the main window list.

Session Storage & Backups

Sessions are stored in a rotating backup system:

File	Purpose
Sessions	Active session list
Sessions1	Most recent backup
Sessions2	Older backup

Each **SAVE** operation rotates the files automatically.

Useful Shortcuts

- **Enter** – Connect to selected session
 - **Delete** – Remove selected session
 - **Ctrl+C** – Copy **IP:Port** to clipboard
 - **ESC** – Close dialogs or editors
-

Ping Test

- Click **PING** to test network reachability
 - Uses system `ping.exe`
 - Confirms both:
 - Server visibility
 - Active internet connection
-

Sessions Folder

Click **Sessions Folder** button to open the location where:

- Session files are stored
 - Tera Term macros (`.ttl`) live
 - Backup sessions files are kept
-

About & Licensing

- The application **does not modify** Tera Term, PuTTY, or WinSCP.
- All third-party software remains property of their authors.
- License documents and homepage links are available from the **About** window.

Hope You Enjoy using 3-Way Client Session Manager!
